Genome polyprotein [Contains: Capsid protein C (Core protein E2 (GF68) (GP70) (NSI); Protein P7; Nonstructural protein NS2 (P21) (EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepacivirin)
EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein NS4B (P27); Nonstructural protein NS5B (P50); Nonstructural Revolution NS5B (P50) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
NS5B (P50) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate Taiwan) (HCV).
Viruses; ssRNA positive-strand viruses, no DNA stage; Flaviviridae; Hepacivirus.
                                                                                                                                                                                                                                                         RNA (N).

-!- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS. PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 POLG_HCVTW

C: -! FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE C: -! PROPROHEIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.

NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

C: -CATALTTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral procursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1.

C: -CATALTTIC ACTIVITY: N nucleoside triphosphate = N diphosphate + C (ANA)(N).

C: -CATALTTIC ACTIVITY: N nucleoside triphosphate = N diphosphate + C (ANA)(N).

C: -I SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN C AND MRNA.

C: -I SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY $29.

SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MRNA.

PROTEIN C AND MRNA.

THE DECEMBER OF PELONGS TO PEPTIDASE FAMILY S29.
                                                                                                                                                                                                                                                                                                                                             US Res. 23:39-53(1992).

FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION. NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION. CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the v precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1'.

CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              QWMNRLIAFASRGNHVSPTHYVPESDA 1940

C -!- FUNCTION. THE SMALL PROTEINS NS2B, NS2B, NS4A AND NS4B ARE.
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
C -!- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6 position, Cys or Thr in P1 and Ser or Ala in P1'.
-!- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         p26664;

Genome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein E1 (GP22) (GP35); Envelope glycoprotein E2 (GP68) (GP70) (NS1); Protein P7; Nonstructural protein NS2 (P21)
(EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepacivirin)
(EC 3.4.21.98); Nonstructural protein NS46 (P4); Nonstructural protein NS48 (P27); Nonstructural protein NS48 (P27); Nonstructural protein NS48 (P27); RNA-directed RNA polymerase) (EC 2.7.7.48)].
NS5B (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate 1) (HCV).
Hepatitis SRNA positive-strand viruses, no DNA stage; Flaviviridae;
                                                       PIR; A39166; GNWVC3.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Inchauspe G.,
       ESSENTIAL CATALYTIC precursor position,
                     FUNCTION: NSSA SEEMS TO HAVE A TRANSCRIPTIONAL ACTIVATORY ROLE. FUNCTION: NSSB IS A RNA-DEPENDENT RNA POLYMERASE THAT PLAYS AN ESSENTIAL ROLE IN THE VIRUS REPLICATION.

CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the viral precursor polyprotein, commonly with Asp or Glu in the P6
                                                                                                                                           ACTIVATION OF NS3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1854

RT "Nucleotide sequence of the genomic RNA of hepatitis C virus isolated from a human carrier comparison with reported isolates for conserved and divergent regions.";

RI "Nucleotide sequence of the genomic RNA of hepatitis C virus isolated from a human carrier comparison with reported isolates for conserved and divergent regions.";

RI J. Gen. Virol. 72:2697-2704(1991).

CC :-- FUNCTION: THE SWALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE CC HYDROPHOBIC, SUGGESTING A POSSTBLE MEMBRANE-RELATED FUNCTION.

CC :-- FUNCTION: THE SWALL PROTEINS OF FOUR PROTEIN IN the PART OF THE VIRAL RNA REPLICATION.

CC :-- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the PART OF COMPACTIVITY: N nucleoside triphosphate = N diphosphate + CC (ARA)(N).

CC :-- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate + CC (ARA)(N).

CC :-- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY A LIPOPROTEIN ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN C AND MRNA.

CC :-- SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT

01-AUG-1992 (Rel. 23, Last sequence update)
28-FEB-2003 (Rel. 41, Last annotation update)
Genome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2 (GP68) (GP70) (NG1); Protein P7; Nonstructural protein NS2 (P21)
(EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein NS4B (P27); Nonstructural protein NS4B (P27); Nonstructural protein NS4B (P27); Nonstructural protein NS4B (P37); Nonstructural protein NS4B (P37); Nonstructural protein NS4B (P37); Nonstructural protein NS5B (P56); Nonstructural protein NS5B (P56); Nonstructural protein NS5B (P56); SP70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate HC-JB) (HCV)
Virusas: ssRNA positive-strand viruses, no DNA stage; Flaviviridae;
                                                                                                                                                                                       the European Bioinformatics Institute. NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the vertices polyprotein, commonly with Asp or Glu in the P6 position. Cys or Thr in P1 and Ser or Ala in P1'.

CATALYTIC ACTIVITY: N nucleoside triphosnhar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS PROTEIN A AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX PROTEIN C AND MRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1619 KPTLVGPTPLLYR-----LGSVTNEVTLTHPVTKYIATCMQADLEVMTSTWVLAGGV

-!- SIMILARITY: Contains 1 actin-binding domain.

-!- SIMILARITY: Contains 2 calponin-homology (CH) c

-!- SIMILARITY: Contains 2 EF-hand calcium-binding

-!- SIMILARITY: Contains 4 spectrin repeats.

    STABILIZATION OF CYTOSKELETAL INTERMEDIATE FILAMENTS NETWORK, BUT
C ALSO IN THE REGULATION OF THEIR DYNAMICS.
C -!- SUBUNIT: HOMODIMER OR HOMOTETRAMER.
C -!- DOMAIN: THE N-TERMINUS INTERACTS WITH ACTIN, THE C-TERMINUS WITH
C AND THE C-TERMINUS CAN BIND INTEGRIN BETA-4.
C AND THE C-TERMINUS CAN BIND INTEGRIN BETA-4.
C -!- PTM: PHOSPHORYLATED BY CDC2, REGULATES DISSOCIATION FROM
INTERMEDIATE FILAMENTS DURING MITOSIS.
C -!- SIMILARITY: Contains 1 actin-binding domain.
C -!- SIMILARITY: Contains 2 plectin repeats.
C -!- SIMILARITY: Contains 4 spectrin repeats.
C -!- SIMILARITY: Belongs to the plakin or cytolinker family.
C -!- SIMILARITY: Belongs to the plakin or cytolinker family.

-!- DISEASE: Defects in ACTN4 are the cause of focal segmental glomerulosclerosis 1 (FSGS1) [MIM:603278], a common renal lesion characterized by increased urinary protein excretion and decreasing kidney function. Renal insufficiency often progresses to end-stage renal failure, a highly morbid state requiring either dialysis therapy or kidney transplantation. FSGS is defined by the presence of segmental sclerosis in glomeruli, and is seen in all ethnic groups, although it is particularly common in individuals of african descent. FSGS occurs as an isolated primary condition or secondary to disorders as HIV infection, obesity, hypertension and diabetes. FSGS may also be inherited as a mendelian trait.
-!- SIMILARITY: Contains 1 actin-binding domain.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
-!- SIMILARITY: Contains 4 spectrin repeats.

FILAMENTS WITH MICROTUBULES AND FILAMENTS TO DESMOSOMES ON MICROFILAMENTS AND ANCHORS LINTERMEDIATE FILAMENTS TO DESMOSOMES OR HEMIDESMOSOMES. COULD ALSO BIND MUSCLE PROTEINS SUCH AS ACTIN TO MEMBRANE COMPLEXES IN MUSCLE. MAY BE INVOLVED NOT ONLY IN THE CROSSLINKING AND STABILIZATION OF CYTOSKELETAL INTERMEDIATE FILAMENTS NETWORK, BUT ALSO IN THE REGULATION OF THEIR DYNAMICS. SUBUNIT: HOMODIMER OR HOMOTETRAMER.

    밁
ISOIGEP30427-4; Sequence=VSP_005052;

ITISSUE SPECIFICITY: WIDELY EXPRESSED WITH HIGHEST EXPRESSION IN SKELETAL MUSCLE AND LOWEST IN THYMUS.

IDOMAIN: THE N-TERMINUS INTERACTS WITH ACTIN, THE C-TERMINUS WITH VINENTIN, DESMIN, GFAP, CYTOKERATINS, LAMIN B; WHEREAS BOTH THE N-AND THE C-TERMINUS CAD BIND INTERAIN BETA-4.

INTERMEDIATE FILAMENTS DURING MITOSIS (BY SIMILARITY).

INTERMEDIATE FILAMENTS DURING MITOSIS (BY SIMILARITY).

SIMILARITY: Contains 1 actin-binding domain.

SIMILARITY: Contains 2 calponin-homology (CH) domains.

SIMILARITY: Contains 3 plectin repeats.

SIMILARITY: Contains 4 spectrin repeats.

SIMILARITY: Contains 4 spectrin repeats.

SIMILARITY: Contains 4 spectrin repeats.
    Of variants with distinct first coding exons and rodless isoforms.";
Genomics 42:115-125(1997).

-I. FUNCTION: INTERLINKS INTERMEDIATE FILAMENTS WITH MICROTUBULES AND MICROFILAMENTS AND ANCHORS INTERMEDIATE FILAMENTS TO DESMOSOMES OR HEMIDESMOSOMES. MAY BE INVOLVED NOT ONLY IN THE CROSSLINKING AND STABILIZATION OF CYTOSKELETAL INTERMEDIATE FILAMENTS NETWORK, BUT ALSO IN THE REGULATION OF THEIR DYNAMICS.

-I. SUBUNIT: HOMODIMER OR HOMOTETRAMER.
